DIII ACTIVITY REPORT ITEM
(17-21 January 1966)

Sanitization of Study on Levees in North Vietnam for Congressional Request

In response to a request from the Department of State, stimulated by an inquiry from Congressman Zablocki, the Geography Division prepared sanitized copies of Levees in the Red River Delta (CIA/HI GS 66-5), which had originally been done in September 1965 at the request of SAVA for use in considering the feasibility of breaching the levees. The sanitized copies, issued without CIA attribution, carried the title Flooding in the Red River Delta, an issuance date of January 1966, and discussed conditions of flooding based largely on analysis of past instances of natural flooding in the area.
